Summary

Hi, I'm İsmail, a software developer with a passion for computers and anything related to them – some might even call me a nerd. I have been involved with software development since my university years and have been working professionally since 2022. I take pride in my ability to learn and apply things quickly and on my own. In my free time, I enjoy reading technical books on computer systems, playing 90's real time strategy games and weightlifting. Also, I am very comfortable with English and quite fluent at it.

Technical Skills & Areas of Interest

- **Programming Languages:** Java 17/21, JavaScript ES14, Typescript, C11
- **Frameworks/Libraries:** Spring Boot 3+, React 18, Raylib
- **Databases:** PostgreSQL 17, Oracle XE 21c
- **Other Useful Things:** Git, Maven, GNU Make, Mockito (with JUnit 4 and 5), ArchUnit, Docker, Redis, Kafka, AWS (RDS, EC2, S3), ELK Stack, Grafana, UNIX Environment, Microservices Architecture, Design Patterns, Agile Methodology
- **Areas of Interest:** Web Development, Operating Systems & Systems Programming

Professional Experience

Associate Software Engineer

June 2025 – ...

Amadeus – Loyalty Management:

My current job. I am responsible with developing new features upon customer requests, query optimizations, report automation and occasional bug fixes inside the Amadeus Loyalty Management project in an agile, corporate and international environment. I also have found myself working with massive datasets here – courtesy of 8 million customer accounts.

Technology Highlights: Java, Oracle, Kafka

Software Engineer

December 2022 — June 2025

Kron – AIOC Platform, Kron Alarm Manager, Data Stream Processing, Dataflow:

My first professional experience, in a company with a very strong start-up like work culture – thus the wild collection of things I have contributed to. Worked with a plethora of technologies and tools to ship products on tight deadlines. My participations include developing a backend platform for future microservices applications, UI developments, developing an entire alarm manager from scratch, writing custom Wireshark dissectors for support teams, developing a custom SSH adapter, writing Dockerfiles for microservices and even helping DevOps teams migrate databases.

Technology Highlights: Java 21, React, Typescript, Kafka, Redis, Docker, PostgreSQL, Oracle

Intern

June 2022 — August 2022

SabancıDX – Cloud Migration:

I was a part of the cloud migration team which was responsible with providing consultancy services to companies on their migration to cloud services, which was the hot topic back in the day. I did research and wrote reports on pricing of services across different providers, provided risk assessments of choosing specific cloud platform providers.

Technology Highlights: Azure, AWS, Google Cloud Platform

Projects (Open Source)

nman – Modern Man Page Generator, **GitHub:** github.com/jilet1308/nman

A man page-like CLI documentation generator for almost any language and function, method, object. Where it differs from simply asking to the AI models is that this project caches previously asked docs and serves them instantly without waiting while also saving tokens/usage limits. Serves generated documents in a colorful .md format through Glow.

brickz – Microservice Ready Backend Platform, **GitHub:** github.com/jilet1308/brickz

My current project, still WIP but I take pride in building this, so there it is. Provides a full security backend for JWT authentication, an email module, a Redis wrapper, extensible error/exception handling. Future plans include OAuth2 implementation, an SMS module, a push notification module, a reporting tool for SQL exports and an alarm manager.

Education

Marmara University – Electrical & Electronics Engineering (English)
